2014

Critical Care SYMPOSIUM

March 28, 2014
Sheraton New Orleans • New Orleans, LA

For current registration and program information, please visit www.scahq.org

Faculty and Planning Committee

Andrew D. Shaw, MB FRCA FCCM
Course Director
Associate Professor of Anesthesiology
Duke University Medical Center
Durham, NC

Amanda Fox, MD MPH
Associate Professor of Anesthesiology
University of Texas Southwestern Medical Center
Dallas, TX

G. Burkhard Mackensen, MD PhD
Professor Anesthesiology
University of Washington
Seattle, WA

Robert N. Sladen, MBChB FCCM
Professor and Vice Chair of Anesthesiology
Columbia University
New York, NY

Chad E. Wagner, MD
Associate Professor of Cardiac Anesthesia & Critical Care
Vanderbilt University
Nashville, TN

Michael H. Wall, MD
JJ Buckley Professor and Chairman
Department of Anesthesiology
University of Minnesota
Minneapolis, MN

Glenn J. Whitman, MD
Associate Professor of Cardiac Surgery
Johns Hopkins Hospital
Baltimore, MD

Aaron M. Cheng, MD
Assistant Professor, Department of Surgery
University of Washington
School of Medicine
Seattle, WA

J. Mauricio Del Rio, MD
Assistant Professor of Anesthesiology
Duke University Medical Center
Durham, NC
1–2 PM Hemodynamic Monitoring
- Mini-TEE: Is There a Place in the CT ICU? (Chad E. Wagner, MD)
- When to Use a PAC (Glenn J. Whitman, MD)
- Arterial Waveform Analysis: How to Use It (Robert N. Sladen, MBChB FCCM)

2–3 PM Fluids and Fluid Therapy
- Crystalloids Are All We Need (Andrew D. Shaw, MB FRCA FCCM)
- Colloids Are Essential (Michael H. Wall, MD)

3–3:15 PM Coffee Break

3:15–4:15 PM Extracorporeal Technology in CT ICU
- Partial Lung Assist: Do We Still Need Ventilators? (Aaron M. Cheng, MD)
- CVVH: A Technique for All (Robert N. Sladen, MBChB FCCM)

4:15–5:45 PM Pro-Con Debate: Blood Transfusion Triggers Are Too Conservative in 2013
- PRO (Glenn J. Whitman, MD, and Michael H. Wall, MD)
- CON (Aaron M. Cheng, MD, and Chad E. Wagner, MD)

5:45-6:00 PM Closing (Andrew D. Shaw, MB FRCA FCCM)

About This Meeting

Course Description
Presented in conjunction with the Society of Thoracic Surgeons this will be a state-of-the-art review of advances in cardiothoracic surgical critical care medicine. It is a half-day program of panels, case discussions, lectures and pro-con debates provided by a combination of cardiac surgeons and anesthesiologists. Topics covered will include the use of restricted view TEE, renal replacement therapy, blood transfusion, hemodynamic management and partial lung assist (mini-ECMO). Registration is limited to ensure interactivity between the attendees and the faculty.

Target Audience
Anesthesiologists who practice anesthesia for cardiac surgery, which include those who practice in both teaching centers and community hospitals and in centers with or without noncardiac surgery. Also included are anesthesia residents and cardiothoracic anesthesia fellows.

Statement of Need
There have been many recent advances in the critical care management of cardiac surgical patients including, but not limited to, hemodynamic management, continuous renal replacement therapy, blood transfusion, and limited-view transthoracic echocardiography. Discussions with attendees at recent anesthesiology meetings and a survey of course evaluations have identified these areas as professional practice gaps and this program of continuing education is designed to address the knowledge and performance deficiencies in these areas.

Critical care medicine for cardiothoracic surgery is not a separate subspecialty but is commonly included within the subspecialty of cardiovascular anesthesia. However, many clinicians who provide anesthesia for cardiac surgery do not routinely provide these services but are required to be cognizant of recent advances and updates in the field. There has not been an adequate forum at national specialty or subspecialty anesthesia meetings to allow these practitioners to keep pace with the advances in CVICU medicine. This program is designed to be an update and review of CVICU for both anesthesiologists who do and those who do not do cardiac surgical ICU.

Goal
To improve the delivery of perioperative care for patients having cardiac surgery, particularly in the postoperative period during the ICU stay.

Objectives
This symposium will have a limited registration and will attempt to maximize interaction between attendees and faculty with the use of panels, case discussions, and pro-con debates. Upon completion of this course, attendees should be able to:
- identify the important perioperative management factors in patients receiving care in the cardiothoracic surgical ICU
- understand and discuss the use of mini-TEE for assessment and management of CVICU patients
- discuss the indications for use of a pulmonary artery catheter in CVICU patients
- understand arterial waveform analysis and its interpretation in the context of acute hemodynamic compromise
- discuss the advantages and disadvantages of crystalloids and colloids in the management of acutely unwell CVICU patients
- understand the latest advances in extracorporeal lung support technology
- discuss the use of continuous renal replacement therapy in the CVICU
- discuss and interpret current practice guidelines for the administration of stored blood products to CVICU patients.

Accreditation Statement
The Society of Cardiovascular Anesthesiologists is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians.

Designation Statement
The Society of Cardiovascular Anesthesiologists designates this live activity for a maximum of 4.75 AMA PRA Category 1 Credit(s)™. Physicians should claim only the credit commensurate with the extent of their participation in the activity.
